ANURAG

MSc Computer Science

anuragftw1912@gmail.com | +49 1621705678 | Freiburg im Breisgau | linkedin.com/in/ultraxcodes

SUMMARY

MSc CS student at University of Freiburg with 3+ years in cloud infrastructure and Python automation. Currently exploring ML/AI concepts including LLM integration, RAG pipelines, and agentic workflows. Seeking Werkstudent roles at the intersection of enterprise AI/ML and cloud operations.

EDUCATION

10/2025 – Present
Freiburg im Breisgau

MSc Computer Science
University of Freiburg
Grade - 2.1 (German Scale)

07/2018 – 08/2022
Pune, Maharashtra. India

Bachelors of Technology Computer Engineering
Bharati Vidyapeeth College Of Engineering
Grade - 1.4 (German Scale)

PROFESSIONAL EXPERIENCE

03/2025 – 09/2025
Gurugram, India

Cloud Security & Infra Ops Engineer, Nagarro

- Engineered and maintained end-to-end observability pipelines for 6,000+ active servers across enterprise clients including BMW, Porsche, and Gulf Air.
- Automated data collection, log parsing, and remediation workflows using Python and AWS scripts, eliminating repetitive manual tasks across live Linux production environments
- Built and maintained custom Grafana dashboards for real-time infrastructure visibility.
- Provisioned and monitored cloud resources on AWS and Azure using Python (Boto3); managed Linux server patching & boot configurations.

09/2022 – 03/2025
Noida, India

Cyber Security Analyst (Beyond Trust PAM), HCLTech

- Monitored system health across 80,000+ Unix/Linux endpoints; developed Python scripts to automate log collection and generate ~30 structured vulnerability reports per week
- Automated access control policy updates across critical systems via REST APIs and Python, reducing manual intervention and improving policy consistency at scale
- Maintained SOPs and internal knowledge bases to standardize operational procedures across cross-functional teams

PROJECTS

Face Mask Detection- Python, OpenCV, Keras, TensorFlow

- Designed and trained a real-time face mask detection model achieving 99% classification accuracy, combining a custom-trained CNN with transfer learning on existing datasets

Anomaly Detection in System Logs — Python, scikit-learn, pandas

- Built an ML pipeline to detect anomalies in system log data using Isolation Forest, achieving significant reduction in false-positive alert rates across high-volume infrastructure logs

SKILLS

Languages & Scripting — Python (pandas, NumPy, scikit-learn, PyTorch, Boto3), SQL, Bash, JavaScript (React, Node.js)

Infrastructure & Cloud — Linux, AWS, Azure, Docker, Git

Monitoring & Observability — Grafana, Prometheus, Zabbix, OpenSearch

AI & GenAI — LangChain, Hugging Face (Transformers), Prompt Engineering, RAG basics, Vector Search

CERTIFICATES

CYBERARK
Certified Delivery Engineer (PAM-CDE)

Beyond Trust - AD
Active Directory Bridge

Google Cybersecurity
Certificate Google Professional Certification
